

17 Lecture - PHY101

Important Mcqs

Which of the following materials has the highest thermal conductivity?

- a) Polymers
- b) Ceramics
- c) Metals
- d) None of the above

Answer: c) Metals

Which of the following materials is most commonly used in electronic devices?

- a) Polymers
- b) Ceramics
- c) Metals
- d) None of the above

Answer: c) Metals

What is the key property of ceramics that makes them useful for high-temperature applications?

- a) High electrical conductivity
- b) High thermal conductivity
- c) High melting point
- d) High ductility

Answer: c) High melting point

Which of the following materials is known for its flexibility and good insulating properties?

- a) Polymers
- b) Ceramics

- c) Metals
- d) None of the above

Answer: a) Polymers

What is X-ray diffraction used for in materials science?

- a) Studying the mechanical properties of materials
- b) Studying the thermal properties of materials
- c) Studying the atomic and molecular structure of materials
- d) None of the above

Answer: c) Studying the atomic and molecular structure of materials

Which of the following is not a key mechanical property of materials?

- a) Tensile strength
- b) Thermal conductivity
- c) Hardness
- d) Elastic modulus

Answer: b) Thermal conductivity

Which of the following materials is used in the aerospace industry due to its high strength and light weight?

- a) Polymers
- b) Ceramics
- c) Metals
- d) None of the above

Answer: c) Metals

Which of the following materials has the highest dielectric constant?

- a) Polymers
- b) Ceramics

- c) Metals
- d) None of the above

Answer: b) Ceramics

What is the role of specific heat in materials science?

- a) It determines how easily a material can be melted.
- b) It determines how easily a material can conduct electricity.
- c) It determines how easily a material can be heated or cooled.
- d) None of the above

Answer: c) It determines how easily a material can be heated or cooled.

Which of the following materials is known for its hardness and resistance to wear?

- a) Polymers
- b) Ceramics
- c) Metals
- d) None of the above

Answer: b) Ceramics
