

38 Lecture - CS302

Important Mcqs

1. What is an equation in mathematics?

- a) A statement that asserts the inequality of two expressions
- b) A statement that asserts the equality of two expressions
- c) A statement that asserts the product of two expressions
- d) A statement that asserts the sum of two expressions

Answer: b) A statement that asserts the equality of two expressions

What is the symbol used to separate the left-hand side and right-hand side of an equation?

- a) Plus sign (+)
- b) Minus sign (-)
- c) Equals sign (=)
- d) Multiplication sign (*)

Answer: c) Equals sign (=)

What is the purpose of an equation in mathematics?

- a) To assert the inequality of two expressions
- b) To assert the equality of two expressions
- c) To assert the sum of two expressions
- d) To assert the product of two expressions

Answer: b) To assert the equality of two expressions

How are equations used in physics?

- a) To calculate the area of a triangle
- b) To describe relationships between variables
- c) To solve quadratic equations
- d) To calculate the circumference of a circle

Answer: b) To describe relationships between variables

What is the process of solving an equation called?

- a) Factoring
- b) Integration
- c) Derivation
- d) Solving

Answer: d) Solving

Which of the following is not an equation?

- a) $2x + 3 = 7$
- b) $3y - 5 > 2$
- c) $5a - 2 = 3a + 4$
- d) $4x - 8 = 12$

Answer: b) $3y - 5 > 2$

Which type of equation involves two variables?

- a) Linear equation

- b) Quadratic equation
- c) Simultaneous equation
- d) Cubic equation

Answer: c) Simultaneous equation

What is the solution of an equation?

- a) The value of the variable that makes both sides of the equation equal
- b) The value of the variable that makes both sides of the equation unequal
- c) The sum of the left-hand side and the right-hand side of the equation
- d) The product of the left-hand side and the right-hand side of the equation

Answer: a) The value of the variable that makes both sides of the equation equal

What is an open sentence in mathematics?

- a) An equation that is true for all values of the variables
- b) An equation that is true for some values of the variables
- c) An equation that is false for all values of the variables
- d) An equation that is false for some values of the variables

Answer: b) An equation that is true for some values of the variables

What is the order of operations used in solving an equation?

- a) Parentheses, exponents, multiplication and division (from left to right), addition and subtraction (from left to right)
- b) Addition and subtraction (from left to right), multiplication and division (from left to right), parentheses, exponents
- c) Exponents, parentheses, multiplication and division (from left to right), addition and subtraction (from left to right)
- d) Multiplication and division (from left to right), addition and subtraction (from left to right), exponents, parentheses

Answer: a) Parentheses, exponents, multiplication and division (from left to right), addition and subtraction (from left to right)
