## 38 Lecture - CS302

## Important Mcqs

1. What is an equation in mathematics?
a) A statement that asserts the inequality of two expressions
b) A statement that asserts the equality of two expressions
c) A statement that asserts the product of two expressions
d) A statement that asserts the sum of two expressions

Answer: b) A statement that asserts the equality of two expressions
What is the symbol used to separate the left-hand side and right-hand side of an equation?
a) Plus sign (+)
b) Minus sign (-)
c) Equals sign (=)
d) Multiplication sign (*)

Answer: c) Equals sign (=)
What is the purpose of an equation in mathematics?
a) To assert the inequality of two expressions
b) To assert the equality of two expressions
c) To assert the sum of two expressions
d) To assert the product of two expressions

Answer: b) To assert the equality of two expressions
How are equations used in physics?
a) To calculate the area of a triangle
b) To describe relationships between variables
c) To solve quadratic equations
d) To calculate the circumference of a circle

Answer: b) To describe relationships between variables
What is the process of solving an equation called?
a) Factoring
b) Integration
c) Derivation
d) Solving

Answer: d) Solving
Which of the following is not an equation?
a) $2 x+3=7$
b) $3 y-5>2$
c) $5 \mathrm{a}-2=3 \mathrm{a}+4$
d) $4 x-8=12$

Answer: b) $3 y-5>2$
Which type of equation involves two variables?
a) Linear equation
b) Quadratic equation
c) Simultaneous equation
d) Cubic equation

Answer: c) Simultaneous equation
What is the solution of an equation?
a) The value of the variable that makes both sides of the equation equal
b) The value of the variable that makes both sides of the equation unequal
c) The sum of the left-hand side and the right-hand side of the equation
d) The product of the left-hand side and the right-hand side of the equation

Answer: a) The value of the variable that makes both sides of the equation equal

## What is an open sentence in mathematics?

a) An equation that is true for all values of the variables
b) An equation that is true for some values of the variables
c) An equation that is false for all values of the variables
d) An equation that is false for some values of the variables

Answer: b) An equation that is true for some values of the variables
What is the order of operations used in solving an equation?
a) Parentheses, exponents, multiplication and division (from left to right), addition and subtraction (from left to right)
b) Addition and subtraction (from left to right), multiplication and division (from left to right), parentheses, exponents
c) Exponents, parentheses, multiplication and division (from left to right), addition and subtraction (from left to right)
d) Multiplication and division (from left to right), addition and subtraction (from left to right), exponents, parentheses
Answer: a) Parentheses, exponents, multiplication and division (from left to right), addition and subtraction (from left to right)
