

# 43 Lecture - CS304

## Important Mcqs

1. **What is abnormal termination?**

- A. A program that runs indefinitely
- B. A program that terminates normally
- C. A program that terminates unexpectedly due to an error or exception
- D. A program that never compiles

**Answer: C**

**What can cause abnormal termination?**

- A. Memory access violations
- B. Stack overflow
- C. Division by zero
- D. All of the above

**Answer: D**

**What is a segmentation fault?**

- A. A type of error that occurs when a program attempts to access memory that has already been freed or is outside of its allocated range
- B. A type of error that occurs when a program runs out of stack space
- C. A type of error that occurs when a program attempts to divide by zero
- D. A type of error that occurs when a program fails to compile

**Answer: A**

**What is an access violation?**

- A. A type of error that occurs when a program attempts to access memory that has already been freed or is outside of its allocated range
- B. A type of error that occurs when a program runs out of stack space
- C. A type of error that occurs when a program attempts to divide by zero
- D. A type of error that occurs when a program fails to compile

**Answer: A**

**What is a floating-point exception?**

- A. A type of error that occurs when a program attempts to divide a number by zero
- B. A type of error that occurs when a program attempts to access memory that has already been freed or is outside of its allocated range
- C. A type of error that occurs when a program runs out of stack space
- D. A type of error that occurs when a program fails to compile

**Answer: A**

**What is integer division by zero?**

- A. A type of error that occurs when a program attempts to divide an integer by zero
- B. A type of error that occurs when a program attempts to access memory that has already been freed or is outside of its allocated range
- C. A type of error that occurs when a program runs out of stack space

D. A type of error that occurs when a program fails to compile

**Answer: A**

**How can abnormal termination be prevented?**

A. Implementing error handling and exception handling mechanisms

B. Proper testing and debugging practices

C. Both A and B

D. None of the above

**Answer: C**

**What is error handling?**

A. A mechanism to catch and handle errors or exceptions

B. A way to prevent programs from crashing

C. A way to write more efficient code

D. A way to increase program security

**Answer: A**

**What is exception handling?**

A. A mechanism to catch and handle errors or exceptions

B. A way to prevent programs from crashing

C. A way to write more efficient code

D. A way to increase program security

**Answer: A**

**What is debugging?**

A. The process of identifying and fixing errors in a program

B. The process of optimizing a program for performance

C. The process of writing code

D. The process of designing a program

**Answer: A**
