

19 Lecture - CS403

Important Mcqs

1. **What is functional dependency in a database?**

- a) A relationship between two tables
- b) A relationship between two attributes or sets of attributes
- c) A method for sorting data
- d) A type of database query

Answer: b) A relationship between two attributes or sets of attributes

Which of the following is an example of a functional dependency?

- a) A customer's name and their address
- b) A customer's name and their favorite color
- c) A customer's phone number and their email address
- d) A customer's age and their gender

Answer: c) A customer's phone number and their email address

What does it mean if attribute B is functionally dependent on attribute A?

- a) The values in attribute A determine the values in attribute B
- b) The values in attribute B determine the values in attribute A
- c) The values in attribute A and B are independent of each other
- d) The values in attribute A and B are not related to each other

Answer: a) The values in attribute A determine the values in attribute B

What is a determinant in a functional dependency?

- a) The attribute that determines another attribute's value
- b) The attribute that is determined by another attribute's value
- c) An attribute that is not related to any other attributes in a table
- d) An attribute that is related to all other attributes in a table

Answer: a) The attribute that determines another attribute's value

Which normal form in database design involves removing partial dependencies?

- a) First normal form
- b) Second normal form
- c) Third normal form
- d) Fourth normal form

Answer: c) Third normal form

In a functional dependency A ? B, what does the symbol ? represent?

- a) Addition
- b) Subtraction
- c) Multiplication
- d) Dependency

Answer: d) Dependency

What is a transitive functional dependency?

- a) A dependency where one attribute determines another attribute

- b) A dependency where three or more attributes are related
- c) A dependency where an attribute determines another attribute through a third attribute
- d) A dependency where two attributes are unrelated to each other

Answer: c) A dependency where an attribute determines another attribute through a third attribute

Which of the following is an example of a partial dependency?

- a) A customer's name and their address
- b) A customer's name and their favorite color
- c) A customer's phone number and their email address
- d) A customer's age and their gender

Answer: b) A customer's name and their favorite color

Which normal form requires that every non-prime attribute is dependent on the primary key?

- a) First normal form
- b) Second normal form
- c) Third normal form
- d) Fourth normal form

Answer: b) Second normal form

Which normal form is the highest level of normalization?

- a) First normal form
- b) Second normal form
- c) Third normal form
- d) Fourth normal form

Answer: d) Fourth normal form
