# **38 Lecture - CS403**

## **Important Mcqs**

#### 1. What are ordered indices?

- A. A type of index used to store data in random order.
- B. A type of index used to store data in a specific order based on one or more columns.
- C. A type of index used only for range queries.
- D. A type of index that is not commonly used in databases.

Answer: B

### Which data structure is commonly used to implement ordered indices?

- A. Hash table
- B. Linked list
- C. B-tree
- D. Queue

Answer: C

#### What is the primary benefit of using an ordered index?

- A. Improved data consistency
- B. Reduced storage requirements
- C. Faster data retrieval based on specific column values
- D. Improved data security

Answer: C

### Can multiple ordered indices be created on the same table in a database?

A. Yes

B. No

Answer: A

#### What is a clustered index in a database?

- A. An index used to store data in random order
- B. An index used to store data in a specific order based on one or more columns
- C. An index used only for range queries
- D. An index that is not commonly used in databases

**Answer: B** 

## What is the difference between a primary key index and a clustered index?

- A. There is no difference.
- B. A primary key index includes only unique values, while a clustered index can include duplicates.
- C. A primary key index is used to ensure data consistency and integrity, while a clustered index is used for fast retrieval of data in a specific order.
- D. A primary key index is used for range queries, while a clustered index is used for specific value queries.

**Answer: C** 

#### What is the downside of using too many ordered indices in a database?

A. Increased storage requirements

- B. Slower data retrieval performance
- C. Increased data inconsistency
- D. Decreased data security

#### Answer: A

## What is a composite index in a database?

- A. An index used to store data in random order
- B. An index used to store data in a specific order based on one column only
- C. An index used to store data in a specific order based on multiple columns
- D. An index used only for range queries

#### Answer: C

## Can an ordered index be used for sorting data?

A. Yes

B. No

Answer: A

## What is the most common type of data structure used to implement ordered indices?

- A. Hash table
- B. Linked list
- C. B-tree
- D. Queue

**Answer: C**
